

To whom it may concern:

I am writing this note in regards to David Dunn and his Survey Crews abilities, right of way lay-out work and the reliability of the Survey Crews.

I have known Mr. Dunn for nearly 20 years, first as a surveyor, later on as a survey party chief, survey supervisor and owner of a survey company. The last few years I have work closely with Mr. Dunn in routing and layout of the pipeline right of way, extra workspaces, recording pipe numbers, determining depth of cover on the pipeline, and gathering the necessary as-built information that the various companies we were working for required.

Mr. Dunn and his Survey Crews are some of the best if not the best survey team I have ever worked with. They look out for both environmental and constructability issues when doing initial lay out work of the pipeline right of way. The Crews relay potential concerns on to the construction and environmental teams on a timely basis. The Survey Crews do an excellent job of flagging up the right of way dimensions, extra workspaces and set-backs.

The Survey Crews are on the job and don't have to be called or hunted down to completed as built information during lowering-in and tie-in activities. I have received no complaints about Mr. Dunn's crews from any of my inspectors overseeing these operations over the pasted years.

I would highly recommend David Dunn and his Survey Crews for your project. If you have any questions or wish additional information please call me. Thanks.
